# The 22nd Nordic Mathematical Contest 

## 31 March 2008 <br> English version

Time allowed is 4 hours. Each problem is worth 5 points. The only permitted aids are writing and drawing materials.

## Problem 1

Determine all real numbers $A, B$ and $C$ such that there exists a real function $f$ that satisfies

$$
f(x+f(y))=A x+B y+C
$$

for all real $x$ and $y$.

## Problem 2

Assume that $n \geq 3$ people with different names sit around a round table. We call any unordered pair of them, say $M$ and $N$, dominating, if
(i) $M$ and $N$ do not sit on adjacent seats, and
(ii) on one (or both) of the arcs connecting $M$ and $N$ along the table edge, all people have names that come alphabetically after the names of $M$ and $N$.

Determine the minimal number of dominating pairs.

## Problem 3

Let $A B C$ be a triangle and let $D$ and $E$ be points on $B C$ and $C A$, respectively, such that $A D$ and $B E$ are angle bisectors of $A B C$. Let $F$ and $G$ be points on the circumcircle of $A B C$ such that $A F$ and $D E$ are parallel and $F G$ and $B C$ are parallel. Show that

$$
\frac{A G}{B G}=\frac{A B+A C}{A B+B C}
$$

## Problem 4

The difference between the cubes of two consecutive positive integers is a square $n^{2}$, where $n$ is a positive integer. Show that $n$ is the sum of two squares.
